Yu-Fang (Roma) Fu

Manchester, UK | amor9121@gmail.com | +44 (0)7570 907 711 | romafu.co.uk | linkedin.com/in/romayffu

Software engineer with eight years of experience across data-intensive banking systems and commercial web applications. Combines production system maintenance, SQL-based analysis, performance testing and front-end development with MSc training in Business Analytics and hands-on Python, Databricks, PySpark and Delta Lake projects.

Work Experience	
08/18 – 08/25	**DIEBOLD NIXDORF, Taipei, Taiwan** **Software Engineer** • Delivered the international Global Honour security project for Windows end-of-support (EOS), coordinating client, APAC security, software and hardware teams, with documentation supporting audit and reproducibility. • Used SQL and database analysis with performance, load and stress testing on monitoring data from 2,000 ATMs to identify peak-hour constraints, improve data quality and strengthen capacity planning. • Led optimisation of the Taiwanese ATM front-end interface through usability analysis; the design was adopted nationwide. • Maintained the ATM monitoring system and supporting web applications, servers and databases, improving system stability and event reporting for operations teams.
02/17 – 07/18	**BEYOND MEDIA GLOBAL LTD, Taipei, Taiwan** **Front-End Web Developer** • Developed and maintained 15+ commercial web applications end to end using JavaScript, React, MySQL and AWS, covering domain setup, CMS deployment, API integration, SSL security and SEO. • Implemented core user-facing features including logins, payments and CRUD functions, collaborating with designers and developers via Git and Jira.
04/14 – 10/15	**VETICA GROUP, Taipei, Taiwan** **Branding Specialist** • Managed stakeholder communication across 10+ brand and product design projects, and built internal administrative systems with data visualisation to improve operational efficiency.
Education	
09/25 – 09/26	**THE UNIVERSITY OF MANCHESTER, Manchester, UK** **MSc Business Analytics: Operational Research and Risk Analysis** • Key modules: Python Programming for Business Analytics, Machine Learning for Business, Applied Statistics and Business Forecasting, and Mathematical Programming and Optimisation. • Applied Python and R to patent forecasting and segmentation for Ericsson, emergency department predictive modelling and optimisation, and an NHS inpatient pharmacy operations simulation.
09/08 – 06/12	**NATIONAL TAIPEI UNIVERSITY, Taipei, Taiwan** **BSc Business Administration** • Key modules: Statistics, Operations Research, Information Management, and Computer Programming.
Projects	
06/26–09/26	**Conservation Data Lakehouse | MSc dissertation with The Wildlife Trusts** Designed a Databricks Lakehouse architecture for heterogeneous IoT sensor and geospatial data, using PySpark, Delta Lake and Medallion ETL/ELT pipelines. Dashboard: digital-reserve-dashboard.vercel.app
01/26	**Decision Analytics Dashboard** Built an interactive web dashboard applying optimisation models, statistical analysis and machine learning to support decision-making. Dashboard: decision-analytics-dashboard-redesign.streamlit.app
Additional Skills	
Technical	Python (Pandas, NumPy, PySpark, Scikit-learn), SQL, R, Databricks, Delta Lake, MLflow, Power BI, Git, JavaScript, Java, AWS
Languages	English (Fluent); Chinese (Native); Spanish (Basic)
Certifications	Semiconductor AI and ChatGPT Applications (National Yang Ming Chiao Tung University); Python Programming (UC San Diego Extended Studies); Security System Integration (Diebold Nixdorf); Front-End Development (Institute for Information Industry)
Interests	Learning new technologies; yoga and social dancing. Volunteer tutor in mathematics and English, including students with special needs.
